My Database Grid

By Alois Kaffl, Germany

I have written a JavaScript database grid which is highly configurable and also editable for updates to the database. As database I use MySQL and the PDO-Extension of PHP. The server-side script language is also PHP.

The grid can have a filter row and can be sorted up or down by any column.

All settable options and available methods can be found in the documentation and in the file of TestGrid.php.

The MyNewGrid_Class.js in this package shows - © by Alois Kaffl, Germany (Demoversion) in the navigation row to indicate a "Demoversion"

By paying through PayPal the amount of 20 € or 25 US$ to alois@kaffl.org - you get a clean version by email. At the same time send to the same email address your data in this form,

Firstname, Familyname, City, Country

and I send the file as an attachment in reply to your email.

Feel free to alter all the files in this package except MyNewGrid_Class.js

Have fun!

Best regards
Alois Kaffl, Germany
